

One pane of glass for your BI + AI

Look at any dashboard. Ask it questions in plain language. Get answers grounded in your own governed data, powered by the AI your organisation already runs.

— WHY TEAMS LOVE IT

Stop switching tools to ask your data a question

PulsePlay puts your BI tools and your AI services behind one screen, so everyone gets the same simple, trusted experience whatever dashboard they are looking at.

Every tool, one assistant

Power BI, Tableau, Qlik, Looker, hosted side by side under a single AI that understands what you are viewing.

Grounded and governed

Answers come from governed data with an honest trust badge. Access is allow-listed and sensitive fields are masked before any model sees them.

Bring your own brain

Genie, Foundation Models, Azure OpenAI, Bedrock, agents. Ten connector paths. Swap the AI without changing the experience.

No new licence, fast to extend

Built in-house on platforms you already own. A new tool or model is a drop-in module, not a rebuild.

SOFTWARE LICENCE

Host any BI tool, vendor-agnostic by design

PulsePlay is the host, not a plugin trapped inside one vendor's surface. Your existing dashboards run inside one screen, embedded securely, and the assistant reasons about whatever you are viewing.

Power BI **Native SDK**

Deepest integration today: a real powerbi-client embed, secure embed-token fallback, a built-in Q&A surface, and deterministic semantic-model KPIs that need no LLM call.

Tableau, Qlik, Looker **Secure embed**

Hosted today through secure embedding. First-class native SDK adapters (Tableau Embedding API v3, qlik-embed, Looker embed-sdk) are on the roadmap.

Any other tool **Generic embed**

The always-works escape hatch: host any URL-addressable dashboard or internal report inside a narrowed, least-privilege sandbox.

AXIS Y, WHAT YOU LOOK AT
The BI vendor

Swap the embedded dashboard tool independently of everything else. Sit it side by side with the assistant, or detach and float either pane.

Power BI

Tableau

Qlik

Looker

Any iframe

AXIS X, THE AI BRAIN
The AI connector

Swap the reasoning engine independently. Ten connector paths, and any combination of BI vendor and AI brain is valid.

Genie

Foundation Model

Azure OpenAI

Bedrock

Agents

🔒 Secure embedding by construction

Every embed credential (Power BI embed tokens, Tableau trusted tickets, Qlik OAuth, Looker signed URLs) is minted server-side by the proxy. Nothing sensitive ever reaches the browser, and each vendor runs in the narrowest sandbox it needs.

🌐 One experience, any dashboard

Whatever the user is viewing, the assistant sees the same governed context and returns the same trusted, status-tagged answer, so analysts stop tool-hopping and platform teams govern in one place.

— HOW IT WORKS

Three steps, one experience

1

Pick your view

Choose the BI dashboard, Power BI, Tableau, Qlik or Looker, hosted right inside PulsePlay.

2

Ask in plain language

The assistant reasons about what you are looking at, routed to your chosen AI brain.

3

Get a trusted answer

Grounded in governed data and tagged Verified, Grounded, Suggestion or Blocked. Never an ungrounded guess.

— WHAT IS INSIDE

Built for the enterprise

AI Insights briefings

Auto Headline, KPIs, Trends, Risks and Actions, plus your own sections.

Ask Pulse chat

Conversational Q&A grounded in the live BI context.

Workbench templates

Author-defined layouts: tabs, landing, scope and section presets.

SQL and markdown sections

Deterministic warehouse-backed KPIs or AI-authored narrative.

Governance and masking

Allow-lists, server-side tokens, field masking, PII redaction.

Light and dark themes

A polished, on-brand experience across every surface.

— WHO IT IS FOR

Analysts and business users

One "ask the data" experience across every dashboard. No tool-hopping, no prompt rebuilding.

Platform and security teams

Centralised tokens, allow-lists, masking and audit. Governance in one place, not per tool.

Architecture and finance

Reuse existing Databricks, BI and LLM investments. No vendor lock-in, no new per-seat licence.

Decision-makers

Answers you can trust, with an explicit status. Decision-support grounded in your governed data.

Look at anything. Ask in plain language. Trust the answer.

Your BI tools, your AI, your data, one screen. Ask the platform team for a walkthrough.
